Aung Myat - Austin

austinlingaungmyat2@gmail.com | 07377349391 | github.com/Austinling | linkedin.com/in/austin-amyat/

EDUCATION

University of Sheffield *BSc Computer Science (Artificial Intelligence)* Expected Graduation: June 2029

- **Grade:** Achieved First-Class Honours in First Year
- **Relevant Coursework**: Practical Algorithms and Data Structures, Java Programming, Systems and Networks, Introduction to Software Engineering,

SKILLS

Languages: Java, Typescript/JavaScript, Python, Ruby, HTML/CSS

Frontend: React, Tailwind CSS, Vite, Canvas API (React-Konva), Data Visualization (Recharts), Lucide-React (Icons),

Backend: Spring Boot,REST API, Cloudflare Workers,

Database & Tools: SQL (D1, SQLite, PostgreSQL), NoSQL (MongoDB) CI/CD (GitHub Actions), Wrangler CLI, Git, Jira

WORK EXPERIENCE

Software Engineering Intern | NovAzure
London, UK | June 2026- Sep 2026

- Implemented a Save Scenario feature using Next.js (React), Typescript, and MongoDB which enabled clients to persist and reload previous model runs, reducing setup time by 20% per session.
- Fixed rendering logic errors with exporting PDFs, reducing error rates to 0%.
- Configured ESLint/Prettier rules to standardize code style for a team of 3 developers and catch syntax errors prior to pull requests, reducing failed PRs by 30%.
- Cut regression testing time by 60% by introducing Playwright automated testing to replace manual checks.
- Communicated updates directly to company leadership and participated in daily Scrum stand-ups under the Agile methodology, managing tasks and tracking deliverables in Jira to meet sprint goals.

Bright Network Internship Experience UK (IEUK)
June 2026

- Developed a Python-based data processing script with Pandas to parse IoT telemetry datasets and identify failing turbine assets based on strict temperature and vibration anomaly thresholds.
- Designed a cloud architecture diagram utilizing message queues and stream processing to eliminate single-server bottlenecks and prevent data loss.
- Wrote an engineering report detailing anomaly findings, infrastructure justification, and cloud cost-optimization strategies.

PERSONAL PROJECTS

Spring Boot Student Marketplace (In Active Development)
June 2026-Present

github.com/Austinling/studentMarketplace

- Designing a modular Java/Spring Boot backend to handle user authentication, product catalogs, and transactional order workflows.
- Modeling relational database schemas in PostgreSQL and building RESTful endpoints for CRUD operations and data retrieval.
- Implementing Spring Security and session/token management to safeguard API endpoints.

Tech Vision UI/UX Hackathon: 1st Place (Full Stack Category)
March 2026

https://tech-vision-ux-hack.vercel.app/

- Addressed a challenge to create the most "unintuitive" UI by building a puzzle game where users must correctly assemble the UI to log in.
- Built the frontend using React-Konva and TypeScript, creating a "snapping" system that locks pieces into place when they are dragged to the right spot.
- Collaborated with backend developers to connect a Python script that sliced images into puzzle pieces, ensuring they fit perfectly on the game board.
- Added captcha challenges every 5 pieces to make the game more difficult and simulate real-world security.
- Won 1st Place out of all full-stack teams for building a creative, working game that successfully combined complex frontend logic with backend image processing.

Rong Admin Dashboard January 2026 - February 2026

github.com/Austinling/adminDashboard

- Addressed the lack of a secure, centralized student data management by building a full-stack dashboard using React and Tailwind CSS, a custom REST API on Cloudflare Workers, and a D1 SQLite database.
- Set up CI/CD pipelines with GitHub Actions to automate builds and minimize downtime.
- Used Recharts to turn student/payment data into interactive charts.
- Used JWT authentication (jose) and SHA-256 password hashing to secure passwords and protect sensitive student data.
- Built a search and payment logging system that significantly reduced the time required to find specific data, leading to an increase in administrative efficiency by 2x.

EXTRACURRICULARS

Hackcessible 2nd Place (Richard & Paul's Challenge)

- Participated in Hackcessible, a collaborative engineering competition focused on designing assistive technologies for disabled community members.
- Collaborated within an interdisciplinary team to design, evaluate, and deliver tailored assistive solutions for two disabled users.
- Conducted user interviews with our challengers to ensure that our solutions were personalized and optimized for their needs.
- Facilitated meetings to evaluate the pros and cons of various materials and mechanisms to select the optimal design.
- Delivered two tailored physical prototypes, securing a 2nd place finish out of 12 teams.

School Of Computer Science First-Year Rep & Meeting Rep

- Served as the sole undergraduate representative in faculty meetings to gather and summarize future department plans for the student body.
- Collaborated with a team of first-year reps to gather student feedback using anonymous forms and help faculty address the concerns of first-year students.
- Influenced department plans by presenting curriculum reviews to department leaders and organized peer-led study groups during busy exam weeks.

Global Engineering Challenge Week 2nd Place

- Collaborated in an interdisciplinary team to design a solution aimed at reducing Sheffield's electronic waste by 20%, earning 2nd out of 6 teams.
- Evaluated how "Right to Repair" laws, manufacturer warranties, and local economic factors would affect the project's long-term success.
- Created a Risk Assessment Matrix to identify and fix potential legal, ethical, and funding issues before they happened.
- Designed the interface with high-contrast colors and simple language to make it easy for everyone to use.
- Presented a detailed project plan for a digital hub to a team of 3 judges that included costs for logistics and database scaling, showing the project would break even in 4 months.

LEADERSHIP

CompSoc Treasurer June 2026 - Present

- Managing budget projections and financial planning for an upcoming 200+ person hackathon alongside a 8-member organizing committee.

iForge IT Team Lead January 2026 - Present

- Led a 3-member IT team managing website maintenance, resolving user technical queries, and assisting with machine support during weekly 3-hour shifts.

Electronics Workshop Organizer June 2026

- Worked in a team of 3 to organize and plan an ESP-32 workshop and worked with faculty members to create a scheduled plan towards holding biweekly workshops on different topics like Robotics, Edge AI, and Networking.
